# Policy & Systems WG – Breakout Session

Laura Lyman Rodriguez, USA  
Nicki Tiffin, South Africa

International 100K Cohort Consortium

## Action Plan – Pragmatic Framework

*“Coordinate with other working groups”*

**Local** Collaborate with & facilitate progress in IHCC Projects

**Community** Topic specific advancement with & through other consortia

**Enterprise** Building resources and disseminating experience

## Proposed 1-3 Year Goals

- Collaborate with other Working Groups to develop project policies and policy frameworks to streamline and promote collaboration and data sharing across IHCC activities
- Interface with and contribute to international efforts to address IHCC policy interests, *e.g.*, data access procedures, policy interoperability, pathways to address privacy regulations, etc.
- Assemble a “tool box” to promote capacity in IHCC cohorts and others around the globe to share data and collaborate to advance science and improve health for all

## Early Specifics (Translation to SMART)

1. Build bi-directional connections to IHCC Activities & Members
  - Policy Consult or Helpdesk-like pathway to capture needs or requests for assistance, *e.g.*, navigating federated data analysis, options for data sharing when data sharing “isn’t” possible
  - Reach out to members and working groups to generate prioritized list of specific obstacles to data sharing and collaboration
  - Solicit and consider issues beyond genomic data and genomic needs
2. Develop relationships with regional as well as global cohort alliances
3. Assemble a ‘reliable source’ for resources as a go-to tool box, and do it “sooner”
  - Build from needs and priorities identified above
  - Use any gaps identified as idea source for IHCC policy development
